EDUCATION

Singapore University of Technology and Design

Singapore

B.Eng. Computer Science (Honors with Distinction) | GPA 4.42/5

Expected Apr 2027

- Singaporean STEP Scholar | Awarded to top 5% of cohort for academic excellence
- Relevant Coursework: Software Testing, Machine Learning, Data Structures and Algorithms, Databases and Distributed Systems, Operating Systems

University of California, Berkeley

Berkeley, California

M.Sc. Technological Entrepreneurship | Immersive Program in Entrepreneurship

Expected Apr 2027

EXPERIENCE

Visa Inc

Singapore

Incoming Software Engineering Intern

May 2026 – Aug 2026

- Working on backend systems and AI products in Java and Springboot.

Binance

Singapore

Software Engineering Intern

Nov 2025 – Apr 2026

- Implemented and deployed a Kafka event-driven Java/Spring Boot service adapter layer that connects to Binance's AI Workflow microservice via REST, supporting ~8k global KYC workflow requests per day in production.
- Added Apollo-configurable KYC rule logic that increased automated acceptance rates by ~5–10% in compliant regions.

MetaBob (*AI codebase analysis startup at NEC X*)

San Francisco, California

Software Engineering Intern

May 2025 – Aug 2025

- Built a rules enforcement pipeline with Python, Instructor, Opengrep for a distributed system via Celery tasks and a Redis message broker, converting natural language contribution guides into enforceable rulesets, reducing manual ruleset creation time by >80%.
- Integrated pipeline into client CI workflows, reducing code review cycles by >70% across client developer teams.
- Open-source contributed the main installation script for Opengrep, serving over 100k users to deploy the library easily in CI/CD workflows.

WebAI (*AI Orchestration Startup; \$40M Series A*)

San Francisco, California

Software Engineering Intern

Feb 2025 – May 2025

- Led a team at Open Project @ UC Berkeley to build an AI-powered video summarization pipeline using OpenCV, OpenAI Whisper, and HuggingFace Transformers, serving 1,000+ end users in law, finance, and professional sectors.
- Reduced content review time by 10×, converting 5-hour keynotes into 5-minute topic-based summaries with keyframes extracted all in <10 minutes using a custom extraction and deduplication algorithm.

OrangeKloud Technology Inc. (*NASDAQ: ORKT*)

Singapore

Software Engineering Intern

Aug 2024 – Dec 2024

- Leveraged MetaGPT, LangChain, PostgreSQL/PGVector to develop a Multi-Agent RAG App Generation Pipeline capable of generating production frontend and backend code in <10 minutes with full API and DB integrations.
- Deployed the pipeline to 2,500+ enterprise customers globally with Docker and Ansible across Azure VM, Blob Storage and PostgreSQL instances.
- Reduced hallucinations by >95% using HITL-integrated RAG which enabled dynamic UI referencing through a 100+ template knowledge base. Increased LLM output token limits by 8× using recursive algorithms and reduced the code generation time down to <4 minutes.
- Designed PostgreSQL schema and efficient querying to handle 10K+ records with low latency; implemented FastAPI endpoints and WebSocket channels for real-time pipeline control, reducing user wait times by 70%

PROJECTS

SUTD - Ascenda: Full-Stack Credit Card Points Exchange Application

Singapore

- Developed a full-stack application using Node.js, Express.js, React, and MongoDB, implementing an event-driven architecture with Socket.io for real-time, webhook-based communication leveraging MongoDB change streams.
- Incorporated ChakraUI with React for the frontend interface utilizing custom hooks to streamline data handling and encapsulate frontend logic.

SUTD - WayFare: Full-Stack P2P Tour Hosting and Discovery Android App

Singapore

- Utilized Java and SpringBoot to develop an app that allowed users to book or host tours with short-form content.
- Used JWT Tokens, Spring Boot Security, Spring Web, Spring Data MongoDB for user authentication and authorization.
- Employed Material Design 3 components to create a seamless UI/UX experience for users.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript

Backend Frameworks and Databases: Springboot, FastAPI, Node.js/Express.js, Maven, React, PostgreSQL / PGVector, MongoDB, Redis, Celery, MetaGPT, Langchain, Apache Kafka

Tools: Docker, Ansible, Azure Cloud Storage, AWS EC2 and AWS Lambdas, Git / Github, Jira Kanban

Licenses & Certifications: Meta Back-End Development, Meta Django Web Framework, Meta Databases for Back-End Development
